Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

1. The Art Unit location of your application in the PTO has changed. To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to Group Art Unit 2646.
2. This communication is responsive to the preliminary amendment filed 10/02/2003.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) The invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) The invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

3. Claims 4-5 are rejected under 35 U.S.C. 102(b) as being anticipated by Azima et al. (U. S. Pat. - 6,151,402).

Regarding claim 4, Azima et al. disclose an electroacoustic transducer (Fig. 3), comprising: a yoke part (92) and having an metalized outer mantle surface; an annular housing component (14, 90) separate from the yoke part and having an metallized inner mantle surface; radially magnetized magnet plates (14-15) arranged between the metallized inner mantle surfaces and the metallized outer mantle surface; and a diaphragm (22) connected to the housing component and having an oscillation coil (16) configured to interact with the magnet plates as claimed.

Regarding claim 5, Azima et al. further disclose the electroacoustic transducer, wherein the yoke part has at least one radial projection (95) and at least a part of surface of the radial projection is provided with a metal coating as claimed.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Azima et al. (U. S. Pat. - 6,151,402).

Regarding claim 6, Azima et al. do not clearly teach that the housing component has an outer diameter of 15 mm or less as claimed. Since Azima et al. do not specially restrict the utilization of the bending wave actuator, and providing a suitable configuration for the actuator is very well known in the art, it therefore would have been obvious to one skilled in the art at the time the invention was made to be motivated to suitably configure the transducer to a smaller size, such as less than 10 mm, as an alternate choice, in order to utilize the transducer in certain application, such as a mobile telephone.
